Summary

Self-taught software engineer with 3 years of professional experience delivering enterprise-scale web applications at a global media agency, advancing from individual contributor to technical lead. Work across the full stack — contributed Django/Python APIs and data pipeline design professionally, and have built fullstack applications end-to-end independently using React Router v7, PostgreSQL, and TypeScript. Bring a strong sense of ownership, an eye for API design, and a track record of raising technical quality in the codebases I work in.

Experience

Software Engineer | Publicis Media

September 2022 – November 2025

Technical Leadership (2024–2025)

- Led frontend development across 3+ concurrent enterprise applications serving internal teams and external clients; owned hiring of junior and mid-level developers, conducted code reviews, mentored new hires, and established development best practices
- Architected reusable component libraries and design patterns shared across multiple applications, reducing duplication and enabling faster feature delivery

Backend & API Development

- Contributed Django/Python API development for internal data pipelines — built CRUD endpoints, designed request/response contracts, and collaborated directly with the data engineering team on integration
- Identified and diagnosed API and architectural issues across Django backend services, defining solutions and surfacing them through the team's implementation pipeline
- Reverse-engineered undocumented Java/Spring Boot APIs from source code to unblock frontend integration when working with an offshore team across timezone constraints
- Identified and led the replacement of insecure API access patterns with JWT authentication on a campaign management platform

Frontend & Data Platform Development

- Built data analytics platform processing 10–50K records per session from AWS S3 with real-time client-side filtering, aggregation, and 50+ custom dashboard pages using React and TypeScript
- Optimized platform performance with parallel API requests, client-side caching, and efficient state management (Jotai, Zustand, Tanstack Query); wrote comprehensive test coverage with Vitest and React Testing Library

- Developed React UI from scratch for a Java/Spring Boot SERP analytics application — built custom form component library, reporting system with 8 report types and 12+ filter combinations, and user management interfaces
- Led complete Angular-to-React migration for advertising campaign platform across 16–20 pages; integrated multiple data sources into unified dashboards with complex chart and visualization components

Lawn Care Technician | TruGreen

2013 – 2021

- Advanced from residential to commercial accounts over 8 years; transitioned into software engineering through self-directed study

Projects

Santa's Lil' Helper v2

github.com/nico-nunez/slh-v2

- Full-stack gift exchange platform built with React Router v7 (SSR-capable, file-based routing), PostgreSQL, and end-to-end TypeScript — sole owner from schema design to production deployment
- Architected layered backend with service/repository separation; Zod validation schemas shared across frontend and backend for end-to-end type safety
- Dual-environment database setup: local Docker PostgreSQL for development, Neon serverless for production; managed schema evolution via Drizzle ORM migrations
- Deployed to AWS EC2 with scripted deployment workflow; E2E test coverage via Playwright, unit tests via Vitest

React Router v7, TypeScript, PostgreSQL, Drizzle ORM, Zod, Tailwind CSS, shadcn/ui, Playwright, Vitest, AWS EC2, Docker

Personal Website

In progress

- Portfolio site built with vanilla web components and no framework — deliberate choice to work closer to the platform and demonstrate range beyond React

Technical Skills

Frontend: React, TypeScript, JavaScript, HTML, CSS, Tailwind

Backend: Node.js, Python, Django, REST API design

Database: PostgreSQL, Drizzle ORM, SQL, data modeling

Testing: Vitest, Playwright, React Testing Library

State Management: Redux, Zustand, Jotai, Tanstack Query

Cloud & Infra: AWS (EC2, S3), GCP, Docker, Docker Compose

Build & Tools: Vite, Git, Jenkins, ESLint

Auth & Security: JWT, session management, secure API patterns

Education

High School Diploma
